

WincSync

WincSync is the ultimate data replication and synchronization application for Open Text eDOCS™. Unlike any other application available, it automatically replicates any validation data, any database server (even different ones), whether in an out-of-the-box table like document types, or a custom-defined table specific to an organization.

WincSync is based upon a 'hub-and-spoke' design. **WincSync** takes data entered into a single 'source' library and applies that data to the other libraries. Users control which tables, which columns, and which 'target' libraries should be included, all from an easy-to-use interface.

- **WincSync** allows for the centralization of maintenance of validation data, significantly reducing the cost and effort necessary to administer document management systems.
- **WincSync** is ideal for any multi-library installation, ranging from a single location with two libraries to an enterprise consisting of dozens of libraries and locations.
- **WincSync** efficiently and securely operates within the Open Text eDOCS framework. All **WincSync** functions are accessible from a single, easy-to use interface.
- **WincSync** is fully compatible with all database servers and document servers supported by Open Text eDOCS™.
- **WincSync** works with any supported version of OpenText eDOCS.
- **WincSync** does not require a dedicated server, and can be run during normal business hours.
- **WincSync** can be run continuously, on-demand, or from almost any scheduling program.

WINCSYNC FEATURES INCLUDE:

- Detects any newly-added or changed row in any validation table in your Source library; and
- Automatically replicates the addition or change to every other library in your enterprise.
- Recognizes and accurately propagates changes to a row's Candidate Key (such as a User ID).
- Processes validation data without the need for require matching System_Ids.

The WincTools Suite provides OpenText eDOCS administrators with the critical tools needed to support and maintain their systems, regardless of the size, number of locations, and complexity of the installation.

The WincTools Suite is ideal for organizations looking to reduce effort and manual oversight, increase the productivity of their support staff, and improve overall end-user satisfaction.
